Six steps to execute WinGrt in a personal computer (PC) with the 64-bit Windows 10 operating system (OS).

1 – Click **Start** button and type **cmd** in the *Type here to search* box. Select **Run as administrator** option. A windows appears on screen showing "*Do you want to allow this app to make changes to your device?*". In this windows, click **Yes** button to continue.

2 – A Black Screen appears on screen starting with the **C:\Windows\system32>** command. In here, type **regsvr32 /u "C:\Program Files (x86)\WinGrt\MSFLXGRD.OCX** and then press **Enter** key. You will see a windows on screen showing "*DllUnregisterServer in C:\Program Files (x86)\WinGrt\MSFLXGRD.OCX succeded*". Press **OK** button to continue.
[Notice a blank between **regsvr32** and **/u** as well as **/u** and "**C:\Program Files (x86)** ...]

3 – Type **regsvr32 "C:\Program Files (x86)\WinGrt\MSFLXGRD.OCX** and press **ENTER** key. You will see a windows on screen showing "*DllUnregisterServer in C:\Program Files (x86)\WinGrt\MSFLXGRD.OCX succeded*". Press **OK** button to continue.
[Notice a blank between **regsvr32** and "**C:\Program Files (x86)** ...]

4 – Close the Black Screen by clicking the **X** sign on the top right side of Black Screen.

5 – When mouse arrow is on the **WinGrt** icon on desktop, click right mouse button and select **Run as administrator** option.

6 – Finally, the program that you installed into a PC with the 64-bit OS is ready to calculate garnet analyses. For example, you can execute the "**Sample.gsg**" file from the pull-down menu of **File ⟶ Open File** options.

Note : Once the program executed with **Run as administrator** option in step **5**, there is no need to apply this option for further program execution.
